

FIRST DUAL, DYNAMICALLY ADJUSTABLE SUPPLY FOR NOTEBOOK VIDEO PROCESSORS AND DDR MEMORY

Low Output Voltage (0.7V) in Smallest Total Solution

The MAX1540 powers CPU I/O, chipset, DRAM, or other low-voltage supplies as low as 0.7V. The MAX1541 powers chipsets and graphics processor cores which require dynamically adjustable output voltages, or active termination buses (DDR memory) that must track the input reference. Both include secondary peak-current limit that protects against inductor saturation and allows the use of low-cost, saturable core inductors.

- ◆ Inductor Saturation Protection
- ◆ Versatile Current Limit, Output, or Lowside MOSFET Sensing
- ◆ $\pm 1\%$ V_{OUT} Accuracy Over Line and Load
- ◆ 2V to 28V Battery Input Range

Part	Output Voltage	PWM	LDO	Pin-Package	Price [†] (\$)
MAX1992ETG	Fixed output 2.5V/1.8V, or 0.7V to 5.5V adjustable	Single	None	24-Thin QFN	2.85
MAX1993ETG	Dynamically selectable output tracking REFIN (0.7V to 5.5V)	Single	None	24-Thin QFN	2.85
MAX1540ETJ	Fixed output 1.8V/1.2V/2.5V/1.5V, or 0.7V to 5.5V adjustable	Dual	Fixed 5V/100mA	32-Thin QFN	3.55
MAX1541ETL*	Fixed 2.5V/1.8V tracking REFIN	Dual	Adj/100mA	40-Thin QFN	3.55

[†]1000-up recommended resale. Prices provided are for design guidance and are FOB USA. International prices will differ due to local duties, taxes, and exchange rates. Not all packages are offered in 1k increments, and some may require minimum order quantities.
*Future product—contact factory for availability.
