

SMALLEST, HIGHEST EFFICIENCY DIGITAL CAMERA POWER CHIPSET

40% Smaller, 10% More Battery Life, More Flexible, and Less Expensive

Use the MAX1800 step-up master or the MAX1802 step-down master to provide all the voltage outputs required in your digital camera designs from a single IC. They include high-efficiency DC-DC converters with synchronous rectifiers to give over 90% efficient power conversion for the logic supply, which uses >50% of the power in a camera system. They come in a small 32-pin 5mm x 5mm TQFP, which is 40% smaller than existing TQFP solutions. They also eliminate external components such as power diodes, power switches, and at least one transformer to save cost and size. For flexibility, add the low-cost 8-pin SOT23 MAX1801 "slave" controller to create optional features like a motor control supply for zooming and focusing.

COMPLETE DIGITAL CAMERA POWER SUPPLY

FREE Power Supplies Design Guide—Sent Within 24 Hours!
Includes: Reply Cards for Free Samples and Data Sheets
